

The Ultimate Cybersecurity Plan

24/7 AI-powered unified detection and response across identities, endpoints, email, cloud, and data.

More Than Just A Security Platform

Unified Security Platform

Centralized cybersecurity through a single platform, to protect across attack vectors with a user-focused approach to simplify day to day operations.

Best of Class Endpoint Protection

Advanced endpoint protection is deployed with real-time detection, providing continuous visibility and automated defense across business devices.

Identity Threat Detection & Response

User behavior is benchmarked and continuously monitored to flag suspicious patterns to prevent account takeover and stop identity-based threats before they spread.

24/7 Managed Protection

A fully managed solution integrates key security layers into a single platform, closing the gaps SMBs face from limited expertise, and rising cyber threats. This enables 24/7 proactive threat monitoring, intelligent automation, and incident support, backed by a team of expert security professionals.

Enterprise-level protection is delivered with a focus on speed, simplicity, and real-world effectiveness.

How Your Business Benefits

Simplified Threat Management

Threats are unified through an identity-centric approach, streamlining communication to improve response times and reduce complexity.

Productivity Automations

AI continuously detects, triages, and responds to threats, filtering out noise, reducing manual tasks, and focusing on real risks to keep the business protected and productive.

Round-the-Clock Expert Support

A dedicated security team monitors systems 24/7, enabling swift action to address real threats, provide updates, and offer ongoing support as needed.

How Managed Security Works for You

Rest well knowing your security is managed with automated detection and response that brings in expert support when it matters most.

1

Alert Triage

AI prioritizes alerts in real time, filtering noise and focusing on critical risks.

- Real-Time Filtering: Only validated, relevant threats are surfaced.
- Automated Workflows: Routine alerts are handled instantly by the platform.

2

Incident Analysis

Machine intelligence and human expertise are combined to investigate threats.

- Global Context: Correlation of threats across environments to understand the bigger picture.
- Analyst Review: Experts interpret key signals and assess true intent and risk.

3

Incident Support

If an incident occurs, experts reach out directly, to keep you in the loop.

- Active Containment: Endpoints are isolated and compromised accounts are suspended.
- Clear Communication: Updates via phone, email, and platform through each stage of the event.

It's Time To Level Up Your Cybersecurity.

Work with true security experts to learn how they can help protect your business.
